

Darius S1 Loudspeaker

OVERVIEW

Darius S1 Loudspeaker Overview

It had long been a dream of Roksan to create a reference loudspeaker that delivered an open, detailed sound, superior bass response and high efficiency housed in the modest dimensions of a standmount design. The Darius S1 is the exciting result of this desire.

Normally a significantly larger drive unit would be used to reach the desired bass frequencies in a speaker the size of the Darius S1. However, the relatively small, excellent customized unit employed here is extremely rigid and can move up to 12mm. This means the unit really moves some air to create fast and deep bass. In combination with the double bass reflex port design this creates something quite unique and special in a speaker of this size! The significant choice of a very high quality aluminium ribbon tweeter also contributes greatly to its superlative sound quality - marrying the deep and tight bass with a highly detailed, open midrange and treble and pin-point imaging. The Darius S1 can be placed in a variety of positions within a room to no detriment of the performance, making it a very flexible and 'real world' audiophile product. We feel that the Darius S1 is the best performing and most involving, exciting loudspeaker that we have ever produced. And we are convinced you'll agree!

Features:

- Ultra-high quality aluminum ribbon tweeter delivering super-fast transients
- 5" customized rigid aluminium bass / mid drive unit, extended long-throw design for increased bass speed and depth
- Use of very high quality components, chosen for superior audiophile performance and reliability
- Extremely rigid and carefully designed cabinet constructed from high quality MDF material with internal decoupling and bracing
- High-quality black or white piano lacquer finish and matching stand that is securely bolted to the cabinet

Specifications:

Tweeter:	Aluminium ribbon design
Woofers:	5.5-inch customized design, optimally tuned
Crossover:	Mundorf components, air core baked inductors, polypropylene low inductance capacitors, metal-oxide resistors, pin to pin soldered, elements for tweeter and woofers are located on separate plates, silver coated cabling
Enclosure:	High quality MDF material, internally reinforced, braced and decoupled, filled with wool, coated with piano lacquer
Input Power:	40-200 watts (recommended)
Sensitivity:	89dB
Impedance:	4 Ohms
Dimensions:	376 x 200 x 376mm (L x W x D)
Net Weight:	13 kg
Finishes:	Black or White Piano Lacquer
